

Hostscreen is a Windows based web hosting control panel. It has three different access levels for your users: Admin, Reseller, and Domain owner. A very complete set of features gives you the freedom in your hosting business you need.

### Hostscreen Control Panel Features:

- Multi-language Support
- Domains Manager (IIS Manager)
- DNS Manager
- Mail Manager
- Database Manager
- Traffic Manager
- FrontPage Manager
- Disk Usage Monitor
- SSL Manager
- ODBC DSN Manager
- Folder Manager
- Customizable Skins
- FREE Support and FREE Installation

In addition to these features Hostscreen comes bundled with several free software packages, including an Email server, two web site statistics servers and a forum application.

Hostscreen can be customized to supports all popular Email servers, DNS servers, FTP servers, Statistics servers, database servers, domain registrant services and

payment gateways. Hostscreen Control Panel can be used by almost all Windows based Web hosting services and is available in several languages.

The Hostscreen Web Hosting Control Panel also supports a distributed environment. Hosting firms can use their own Email and DNS servers (External DNS server) on separate boxes, including Linux systems. This allows Hostscreen users the flexibility to design custom server structures. Enterprise users, for example, can use Linux Email and DNS servers, while offering high quality Windows based Web hosting to their users: the best of both worlds.

We also offer full customization of the Control Panel to make your hosting business run as smooth as possible.
